Since its introduction, the Skyline GT-R has been the undeniable king of the tuner CAR world. This book explains why. Along with an overview of Skylines since their debut in 1957, Author Alex Gorodji gives in-depth reviews of the last four generations of GT-Rs, including the new-for-2008 V35 – the first iteration of the car to be sold in the U.S. Paying special attention to technical aspects such as the all-wheel steering and drive systems, the chassis, and the legendary six-cylinder twin-turbocharged engine, his work explains the GT-R to those who already admire the car, and to those who wonder what the excitement is all about.

Despite the negative press Asian economies have received in connection with the recent financial crisis, their record of spectacular growth over the past few decades remains irrefutable. In an effort to provide a rich, textured analysis of these economies, editor W. Mark Fruin presents a collection of essays that explores the wide range of network organizations that have been established in the Pacific Rim. Conventional studies of economic organization have tended to center on markets and hierarchies, the two forms of organization most common in the West. But today the world moves too quickly and too unpredictably for the idealized organizations of microeconomic theory to keep up. It is no accident that the region that has generated the world's most explosive economic growth is also the region where network organizations--sets of independent actors who cooperate frequently for mutual advantage--are most pervasive. Rapid economic, social, and technical changes favor the formation of network organizations, and vice versa. The contributors to this volume identify and elucidate four basic types of networks: naturally occurring networks, market replacing networks, hierarchy replacing networks, and market enhancing networks. They show how all of these have been shaped by the history, government, legal system, and culture of each country under consideration. These network organizations allow the authors to compare and contrast network forms in China, Japan, South Korea, Taiwan, and the United States according to features such as degrees of formalization, rule definition, and market conformance. The works collected here make an important contribution to a networks-markets- hierarchies framework that recognizes and emphasizes the diversity of
