16 Symptoms of Immune System Problems - WebMD

Many primary immunodeficiency disorders are inherited — passed down from one or both parents. Problems in the genetic code that acts as a blueprint for producing the cells of the body (DNA) cause many of the immune system defects. There are more than 300 types of primary immunodeficiency disorders, and researchers continue to identify more.

Autoimmune Diseases | NIH: National Institute of Allergy ...

The immune system is a network of biological processes that protects an organism against disease. It detects and responds to a wide variety of pathogens, from viruses to parasitic worms, as well as cancer cells and objects such as wood splinters, distinguishing them from the organism's own healthy tissue. Many species have two major subsystems of the immune system.

Addison ' s disease is caused by an autoimmune response, which occurs when the body ' s immune system (which protects it from infection) assaults its own organs and tissues. With Addison ' s disease, the immune system attacks the outer portion of the adrenal glands (the cortex), where cortisol and aldosterone are made.
