This book assesses the diplomatic path of influence taken by German decision-makers during the early nineties in pursuit of their cautiously articulated interest in and commitment to the eastward enlargement of NATO.

This comprehensive, in-depth assessment of the German foreign policy record under the Red-Green government of Gerhard Schröder and Joschka Fischer from 1998 to 2005, produced by a team of German and international experts, explores the idea of continuity and the sources, depths and directions of German foreign policy.

In 1990, the future of Europe's international politics hinged on two questions. How would unification affect the conduct of German foreign policy? Would those institutions that had given security and prosperity to Western Europe during the Cold War now do the same for the entire continent, and if so, how. The intersection of these questions is the topic of this book, which explores, quite plainly, what made Germany's policies towards its immediate Eastern neighbours tick.

The unification of Germany was the single most important event in 1989-90, the European year of revolutions. The Diplomacy of Germany Unification tells the story of the international aspects of the creation of united Germany. Based on interviews with key Soviet, German and American officials who shaped the final settlement, as well as on extensive journalistic and other secondary sources, this study is the most comprehensive account to date of the diplomatic negotiations over the future political, economic and security role of the new Germany. Dr. Szabo describes and examines such fundamental issues as the development of the grand compromise on NATO membership for united Germany and the new nation's future security status, the resolution of the Polish-German border debate, and the shaping of the diplomatic negotiation structure. This is an important book for all those wishing to understand the nature both of united Germany and of the new Europe.

This text examines German foreign policy during the 1990s, ranging from policies towards nuclear weapons and the use of force to European integration, from Human Rights policies to German participation in NATO's war in Kosovo.

Essay from the year 2006 in the subject Politics - International Politics - Topic: German Foreign Policy, London School of Economics (Department of International Relations), language: English, abstract: The end of the Cold War in 1989/90 did not only prompt a fundamental transformation of the international system as a whole; it equally changed the expectations and perceptions of key nation-states acting within that system. This was, as most scholars of International Relations (IR) agree, especially true with regard to reunited Germany. In the run-up to the negotiations of the 'Two-plus-Four Treaty', many observers feared that the demise of the East-West confrontation might encourage the Federal Republic to completely strip off its post-war restraints and use its revamped resources and autonomy more forcefully. By the same token, some European leaders — notably French President François Mitterrand and British Prime Minister Margaret Thatcher — voiced concerns that a resurgence of German power politics seemed far from being just a theoretical possibility. Indeed, some indications of a renewed German propensity to 'go it alone' emerged even before the legal and political terms of unification had been clarified. Chancellor Kohl's '10 Points Plan' of November 1989 aroused deep scepticism. Even more alarmingly, German contributions to armed operations in Bosnia and Kosovo were perceived as incidents of a much more self-confident security posture. However, a vast majority of German politicians was eager to defuse their neighbours' suspicions, emphasising that they would retain their commitment to a culture of 'civilian power.' The country would remain a driving force for deeper and wider European integration as well as multilateralism within the frameworks of the UN, NATO and CSCE/OSCE. Yet, despite these efforts to address other states' concerns, some observers doubted whether Germany would actually be willing and able to stick to its 'leadership avoidance reflex' in the future. Almost two decades after reunification, it might thus be worthwhile to ask: is Germany still a 'civilian power'? To answer this question, I will first describe different dimensions of political power as they are treated in IR theory and illustrate what 'civilian power' means in this context. Secondly, I will outline in how far particular concepts of foreign policy (FP) behaviour — the models of 'security', 'trading' and 'civilian states' — are capable of grasping the notion of civilian power. Section 4 relates these conceptual frameworks to important features of Germany's actual FP conduct before and after the watershed events of 1989/90.

The future of European foreign policy is of vital significance to the developing world order. The failure of US policy in Iraq has underscored the need for Europe to play a constructive global role. Nevertheless, divisions within Europe over the Iraq war and over the future development of the European Union have raised questions about the potential for an effective European foreign policy—whether organized through EU institutions or via individual member states. This book will consider why Europe should assume global responsibilities, how they will be organized institutionally, whether they will be adequate to address pressing regional and security concerns, and how they will reflect the foreign policy interests of Europe's major powers. It is the intention of this book to cover both thematic and country-specific issues, ranging from Europe's responsibility as a global actor and EU-NATO relations to the specific influence of Germany, France, Italy and the United Kingdom. The contributors come from across the European Union and represent a mix of established and rising scholars. This book was published as a special issue of the Journal of European Integration.

Dyson explains the convergence and divergence between British, French and German defence reforms in the post-Cold War era. He engages with cultural and realist theories and develops a neoclassical realist approach to change and stasis in defence policy, bringing new material to bear on the factors which have affected defence reforms.

Since the fall of the Berlin Wall, NATO's middle powers have been pressured into shouldering an increasing share of the costs of the transatlantic alliance. In Sharing the Burden? Benjamin Zyla rejects the claim that countries like Canada have shirked their responsibilities within NATO. Using a range of measures that go beyond troop numbers and defense budgets to include peacekeeping commitments, foreign economic assistance, and contributions to NATO's rapid reaction forces and infrastructure, Zyla argues that, proportionally, Canada's NATO commitments in the 1990s rivaled those of the alliance's major powers. At the same time, he demonstrates that Canadian policy was driven by strong normative principles to assist failed and failing states rather than a desire to ride the coattails of the United States, as is often presumed. An important challenge to realist theories, Sharing the Burden? is a significant contribution to the debate on the nature of alliances in international relations.

This important new volume advances current role theory scholarship, offering concrete theoretical suggestions of how foreign policy analysis and IR theory could benefit from a closer integration of role theory. It will be of great interest to all scholars and students of international relations, foreign policy and international politics.
