Diabetes 2 Survival Guide eBook written by Deborah Montalto Piffer, a true life guide on how to beat Diabetes 2 and look fabulous doing it.

Registered dietitian Brenda Davis is an authoritative voice on the effects of a whole-foods, plant-based diet on diabetes prevention and reversal due to her work for over a decade as the lead nutritionist with the Diabetes and Wellness Project in the Marshall Islands. In this definitive guide, she explains the series of metabolic events that lead to diabetes and why this illness is so catastrophic for health. Over the last fifty years, nutrition researchers have built upon each other's work to prove that a diet based on plant foods could reduce diabetes risk and in many cases reverse diabetes. Discover the latest research into why plant foods lead to success, which foods are the most effective, and how to construct a diabetes-busting diet that not only gets results but also is simply delicious. In addition, you'll learn how to combine diet, exercise, rest, and stress management into a powerful prescription for health. Included are menu plans based on over 40 recipes featuring the nutrient-dense foods needed to reverse diabetes. Inspiring stories demonstrate how the initial success of this diet builds confidence and encourages people to adopt a healthier lifestyle.

Current scientific studies show that most people with type 2 diabetes can reverse the disease by eating a plant-based diet and making other healthy lifestyle changes. The Kick Diabetes Cookbook provides a blueprint for what to eat to defeat diabetes and offers 100 quick-and-easy recipes that are delicious and satisfying. Diabetes authority Brenda Davis, RD, outlines an action plan for including more foods that help regulate blood glucose levels and avoiding foods that send those levels skyrocketing. She clarifies why not all carbohydrates promote diabetes, explains how plant-based protein reduces diabetes risk, and

# Where To Download Kicking Diabetes

illustrates why a whole-foods, plant-based diet is naturally low in fat and sodium. Coauthor Vesanto Melina, MS, RD, provides nourishing fare that ranges from tempting comfort food to sinful-tasting treats. Information on composing nutritious meals and cooking beans and grains is included, along with a sample weeks menu. Each recipe is accompanied by a complete nutritional analysis.

Describes the symptoms, diagnosis, treatment, and genetic aspects of diabetes.

I give you this book with my love and hope. There are way too many people suffering from Diabetes unnecessarily. Another title, "I Want To Live" is the same as this book, except it contains pictures of the recipes. I created this one for you at a lower cost, so more people could get it and get healthy faster. Please don't wait; your life could depend on it. I went from a 9.1A1C to 5.2 in one year. If you're serious about living a happy, healthy life, read this book and do the work. Please! I wrote it all down FOR YOU.

As Coach Dooley alluded to in writing the foreword to this book, oftentimes the relationship between a coach and athlete is a two-way street. Each can be an inspiration to each other. This was the case when Kim Braswell, an exceptional athlete handed many challenges, became a part of the football program at the University of Georgia. This story is not about Kim's success as an athlete or coach. The goal of this book is that it will provide inspiration to parents and children with handicaps, whatever their issue. As

## Where To Download Kicking Diabetes

referenced in these pages, many good people contributed to the successes of Kim in sports, coaching, and life. Inspiration can be given and received. If this writing can transmit a sense of positivity to others with any type of adversity, then the author will have a feeling of accomplishment. This accomplishment will be about motivating and helping others just as so many have done for him.

After a life-threatening event, the No Sugar Baker rolled up her apron, changed her lifestyle and has quickly become one of America's favorite self-taught bakers. She shares her informative health experience and over one hundred recipes. She'll be your favorite, too!

A lot of time has been spent trying to convince health care providers and policy makers of the enormous importance of macrovascular disease in persons with type 2 diabetes. In this volume, we present facts that demonstrate how important it is to recognize macrovascular disease in these patients in daily practice. This volume has been compiled to help those already involved in diabetes care, to be more involved in cardiovascular risk control, a task that is not easily achieved. The area of cardiovascular risk in type 2 diabetes is heterogeneous. Trying to characterize it, we can only say: certainly we know more than we do, but for sure we do less than we could. Our challenge is to change this. Nicolae Htmcu Professor N. Hancu was born in Romania in 1940. He studied medicine at the Iuliu Hatieganu University of Medicine and Pharmacy, Cluj-Napoca, and obtained his speciality in internal medicine in 1970, and in diabetes, nutrition and metabolic disease in 1986. He was appointed Professor and Head of the Department of Diabetes, Nutrition and Metabolic Diseases of the same university in 1993. He has been a full member of the Romanian Academy of Medical Sciences since 1995. Professor Hancu's major interest is related to clinical lipidology, visceral obesity, and cardiovascular risk in type 2 diabetes. He

## Where To Download Kicking Diabetes

has published over 200 papers and 14 books in this area. He has been invited as Visiting Professor at many universities in Madrid, Valladolid, Barcelona, and Los Angeles.
