As Japan moves from a "catch-up" strategy to a post-developmental stage, it is changing its actions and reactions both in terms of international political economy and domestic policy issues. The current changes in Japan can best be understood as following a path toward "permeable insulation." Japan's government and economic system continue to insulate domestic businesses from full competition and the rigor of market forces, but this insulation is also permeable because a decline in state power vis-a-vis the private sector since the 1990s has combined with a decline in the solidarity of private institutions (such as keiretsu or trade associations) to make strategies of insulation much less rigid and uniform. As a result of the "permeable insulation," Japan's response to the global and domestic challenges of the 1990s is neither one of full acceptance nor rejection of global standards and practices. Instead, the basic scheme is one of pragmatic utilization of new rules and circumstances to continue industrial policies of promotion or protection in a new post-developmental era. By bringing together in-depth case studies of eight critical issue areas, this book looks at Japan's responses to globalization and move toward "permeable insulation." Part 1 introduces the reader to the concept of "permeable insulation" and provides a detailed review of past practices and changes in policy. Part 2 deals with international trade issues, Japan's compliance with and resistance to global trade rules, and the domestic interests visible in Japan's compliance. Part 3 focuses on domestic measures and policies that Japanese firms have used to adapt to the changes, within Japan and abroad, triggered by globalization and liberalization.

the Roof Construction Manual is a comprehensive reference work on the construction of pitched roofs, containing over 1800 plans and 220 photographs. Thirteen fundamental roof types and the relevant materials including thatch, wood, slate, tile, concrete, fibrous cement, bitumen, glass, metal, membranes, and synthetic materials are documented in detail. Essential topics such as ventilation, vapour and wind seals, insulation and drainage, renovation and energy conservation are examined. As with all the Construction Manuals, some 38 built examples illustrate the theoretical details, paying particular attention to important features such as the ridge, hip, eaves, roof valley, verge, and penetration. A compact presentation of the load-bearing physics and structures as well as current norms and standards make this volume an indispensable standard work for all architects and engineers.
