### management of benign biliary stenosis and injury a ...

Learning Objective: upon completion of this activity, participants should be able to discuss the indications to use self-expandable metal stents (SEMS) for management of benign biliary strictures, identify patients at high-risk and low-risk for migration of these stents after placement, and understand the risks and benefits of fully-covered, self-expandable metal stents (FCSEMS) versus plastic stents for management of chronic pancreatitis.

### Successful Management of Benign Biliary Strictures With ...

When self-expanding metal stents are placed via a percutaneous approach, placement of an internal-external biliary drain for 1–2 weeks enables easy interval management of complications, such as bleeding and acute reobstruction; this option represents an advantage of percutaneous transhepatic biliary drainage over endoscopic biliary drainage, as it provides additional opportunities to clear clots and debris and to replace stents in problem segments before complete removal of the catheter.
