Modern science historians have typically treated the sciences of the ancient Near East as separate from historical and cultural considerations. At the same time, biblical scholars, dominated by theological concerns, have historically understood the Israelite god as separate from the natural world. Cooley's study, bringing to bear contemporary models of science history on the one hand and biblical studies on the other hand, seeks to bridge a gap created by 20th-century scholarship in our understanding of ancient Near Eastern cultures by investigating the ways in which ancient authors incorporated their cultures' celestial speculation in narrative. In the literature of ancient Iraq, celestial divination is displayed quite prominently in important works such as Enuma Eliš and Erra and Išum. In ancient Ugarit as well, the sky was observed for devotional reasons, and astral deities play important roles in stories such as the Baal Cycle and Shahr and Shalim. Even though the veneration of astral deities was rejected by biblical authors, in the literature of ancient Israel the Sun, Moon, and stars are often depicted as active, conscious agents. In texts such as Genesis 1, Joshua 10, Judges 5, and Job 38, these celestial characters, these "sons of God," are living, dynamic members of Yahweh's royal entourage, willfully performing courtly, martial, and calendrical roles for their sovereign. The synthesis offered by this book, the first of its kind since the demise of the pan-Babylonianist school more than a century ago, is about ancient science in ancient Near Eastern literature.

The Circulation of Astronomical Knowledge in the Ancient World explores the ways in which astronomical knowledge circulated between different communities of scholars over time and space, and what was done with that knowledge when it was received.

"This book examines the innovations of the ancient philosopher Aratus in the field of astronomy"--Provided by publisher.

The nightly appearance of the stars, their arrangement in the sky, their regular risings and settings through the course of the year, have been a source of endless wonder and speculation. But where did the constellations come from and what are the myths associated with them? Star Myths of the Greeks and Romans is the most comprehensive work ever published on the forty-eight classical constellations. Included in this handbook are the only surviving works on the constellation myths that have come down to us from antiquity: an epitome of The Constellations of Eratosthenes --never before translated into English -- and The Poetic Astronomy of Hyginus. Also provided are accurate and detailed commentaries on each constellation myth, and complete references for those who wish to dig deeper. This book is a comprehensive

sourcework for anyone interested in astronomy or mythology -- and an ideal resource for the occasional stargazer.

Leading evangelical scholar John Walton surveys the cultural context of the ancient Near East, bringing insight to the interpretation of specific Old Testament passages. This new edition of a top-selling textbook has been thoroughly updated and revised throughout to reflect the refined thinking of a mature scholar. It includes over 30 illustrations. Students and pastors who want to deepen their understanding of the Old Testament will find this a helpful and instructive study.

Examining every aspect of the culture from antiquity to the founding of Constantinople in the early Byzantine era, this thoroughly cross-referenced and fully indexed work is written by an international group of scholars. This Encyclopedia is derived from the more broadly focused Encyclopedia of Greece and the Hellenic Tradition, the highly praised two-volume work. Newly edited by Nigel Wilson, this single-volume reference provides a comprehensive and authoritative guide to the political, cultural, and social life of the people and to the places, ideas, periods, and events that defined ancient Greece.

Official title: Do the prehistoric interactions between astronomy and religion form a distinct religious tradition? In the dissertation for his Master's of Arts degree from the University of Central Lancashire, Cometan introduced and thoroughly explored his theory of the existence of the oldest religious tradition based on astronomical observation which he titles the Astronic tradition, or Astronicism. In this work, which received a Distinction Grade of 87 following its examination, Cometan discovers that astronomy and religion were indeed intertwined in prehistoric and ancient times. Through archaeological evidence, Cometan makes the case for the existence of an Astronic religious tradition stretching back to the Upper Palaeolithic period of the Stone Age some 40,000 years ago. Key ideas of Cometan's dissertation work include astromorphism, astrolatry, astroglyphs, astromancy, astronomical religion, and the theory of an astronomical Urreligion (an original or primordial religion).

Francesca Rochberg has for more than thirty-five years been a leading figure in the study of ancient science. "The Scaffolding of Our Thoughts" honors this luminary with twenty essays, each reflecting on aspects of her work.

The nightly appearance of the stars, their arrangement in the sky, their regular risings and settings through the course of the year, have been a source of endless wonder and speculation. But where did the constellations come from and what are the myths associated with them? Star Myths of the Greeks and Romans is the most comprehensive work ever published on the forty-eight classical constellations. Included in this handbook are the only surviving works on the constellation myths that have come down to us from antiquity: an epitome of The Constellations of Eratosthenes--never before translated into English -- and The Poetic Astronomy of Hyginus.
