The units of the rate of reaction would therefore be g s^{-1} or $\text{cm}^3 / \text{dm}^3 \text{ s}^{-1}$. Time is usually in seconds as most reactions naturally occur fast. If one of the products is a gas which is given off, then the reaction can be performed in an open flask on a balance to measure the loss in mass of reactant.

The role of the chemical reactor is crucial for the industrial conversion of raw materials into products and numerous factors must be considered when selecting an appropriate and efficient chemical reactor. Chemical Reaction Engineering and Reactor Technology defines the qualitative aspects that affect the selection of an industrial chemical reactor and couples various reactor models to case-specific kinetic expressions for chemical processes. Thoroughly revised and updated, this much-anticipated Second Edition addresses the rapid academic and industrial development of chemical reaction engineering. Offering a systematic development of the chemical reaction engineering concept, this volume explores: essential stoichiometric, kinetic, and thermodynamic terms needed in the analysis of chemical reactors homogeneous and heterogeneous reactors reactor optimization aspects residence time distributions and non-ideal flow conditions in industrial reactors solutions of algebraic and ordinary differential equation systems gas- and liquid-phase diffusion coefficients and gas-film coefficients correlations for gas-liquid systems solubilities of gases in liquids guidelines for laboratory reactors and the estimation of kinetic parameters The authors pay special attention to the exact formulations and derivations of mass energy balances and their numerical solutions. Richly illustrated and containing exercises and solutions covering a number of processes, from oil refining to the development of specialty and fine chemicals, the text provides a clear understanding of chemical reactor analysis and design.

This four-volume set provides updated empirical research and best practices for understanding and managing workplace diversity in the 21st century, including issues of gender, race, generation, disability, sexual orientation, national origin, and age.

The Institute for Computer Applications in Science and Engineering (ICASE) and NASA Langley Research Center (LaRC) brought together on October 2-4, 1989 experts in the various areas of combustion with a view to expose them to some combustion problems of technological interest to LaRC and possibly foster interaction with the academic community in these research areas. The topics chosen for this purpose were flame structure, flame stability, flame holding/extinction, chemical kinetics, turbulence-kinetics interaction, transition to detonation, and reacting free shear layers. The lead paper set the stage by discussing the status and issues of supersonic combustion relevant to scramjet engine. Then the experts were called upon i) to review the current status of knowledge in the aforementioned areas, ii) to focus on how this knowledge can be extended and applied to high-speed combustion, and iii) to suggest future directions of research in these areas. Each topic was then dealt with in a position paper followed by formal discussion papers and a general discussion involving the participants. The position papers discussed the state-of-the-art with an emphasis on key issues that needed to be resolved in the near future. The discussion papers critically examined these issues and filled in any lacunae therein. The edited versions of the general discussions in the form of questions from the audience and answers from the speakers are included whenever possible to give the reader the flavor of the lively interactions that took place.

Essays in Our Changing Order is split into three sections, Essays in Economics, Miscellaneous Papers, and War Essays. Veblen was in reality was one of those rare men who may be said to have been ahead of his time, ahead in the sense that what he said and thought was destined to be accepted by succeeding generations though they were rejected by his own. This early work by Thorstein Veblen was originally published in 1927, we are now republishing it with a brand new introductory biography.

This book addresses women's civil strategies for negotiation and leadership through careful analysis of social science research and management theory as well as interviews with women legislators, documenting how women in Washington are affecting the development of the world at all levels. • Addresses how women in Washington have redefined leadership and power in terms of how they listen, work collaboratively, negotiate, facilitate change, communicate effectively, and empower and mentor others • Identifies differences in the evidenced personal ethics between the genders in Congress that are reflective of their characters and professionalism—or lack thereof • Provides examples of the unusual bipartisanship and civility can be seen in the informal "sisterhood" that women senators and representatives have established that allows for more mature and cooperative relationships

This new Understanding treatise provides a compact review of the three main approaches to combating terrorism: criminal proceedings, intelligence and prevention, and military action. The three modes of responses are not the same; each has benefits and limitations, and it will be difficult to find the proper balance among them. Understanding the Law of Terrorism contributes to the search for balance by providing the tools for analysis and application of each of the three modes of response. • With regard to law enforcement, it covers the requirements of conspiracy law, the principal statutes dealing with terrorism, designation of foreign terrorist organizations, and the crime of material support of terrorist activity or organizations. It also goes into the international law dealing with crimes against humanity which could be a source of enforcement principles for terrorism. • On the intelligence front, the book deals with the structure of the Intelligence Community, the operation of the Foreign Intelligence Surveillance Act (FISA), and the mechanics of the Classified Information Procedure Act (CIPA). • With regard to military response, the book summarizes the Law of Armed Conflict (LOAC), delves into military detentions, extraordinary renditions, and harsh interrogation or torture. Finally, the book concludes with a look at the law of emergency situations and the degree to which ordinary processes of law may be suspended in times of crisis, looking at both U.S. and foreign cases. Throughout the book, there are references to the law of other nations and international law. There is also an Appendix with the principal U.S. statutes, the major international conventions and treaties, and the relevant U.S. executive orders.
