serves as a combustion chamber.

When the mixture is ignited, combustion takes place on the surface of the propellant. A flame front is generated which burns into the mixture.

Conceptually, solid rocket motors (or

SRMs) are simple devices with very few moving parts. An electrical signal is sent to the igniter which creates hot gases which ignite the main propellant grain (see image below). The propellant contains both fuel and oxidizer; therefore these devices can operate in the vacuum of space.
